

Carriage Rollers

Carriage Rollers - Specially designed bearings called carriage rollers are frequently seen on lift masts because they enable them to function better within challenging environmental conditions. The conventional lift mast is regularly subject to frequent shocks, oscillations, vibrations and high dynamic and static loads. This equipment is often exposed to environmental influences like for instance cold, heat, dust, contamination, aggressive ambient air and moisture. Hence, the lift masts' guidance arrangements have to be specifically robust and have a specific high load carrying capacity.

To be able to help compete in lots of various environmental surroundings, carriage rollers were designed for various lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
